

Mammoth Laundromat Testimony

Initial Follow-Up

I recently had EZ-Efficiency install their BIO-Therm kits in my dryers at Mammoth Laundromat in Fresno CA. The units were installed in 57 dryers 2 weeks ago so I cannot report on savings so far, but we are noticing that the dry time is reduced by

almost 20%. I believe this is because we are getting a much more consistent heat range with BIO-Therm kits installed.

I would also like to thank Mark and Lee for a very professional installation. They were very thorough both in the install process and testing to make sure every dryer was working properly. In my case they found some issues with my dryers that I was not even aware that I had, and they corrected them for me.

2nd Follow-Up

I received my first full month's power bill since the install. After going over the numbers from previous bills, I am down 23.5% in gas consumption. After extracting the usage for heating and hot water heaters, that puts me well above 25% savings on the dryers.

The BiO-Therm units are doing all that you said they would and more. We are definably experiencing shorter dry times. Thanks again and for a great install job and a great product.

3rd Follow-Up

14 months after the install, I am still seeing over 25% savings and drying times are consistently reduced by about 20%.

Another positive is that customer complaints have reduced considerably concerning the dryers. I would typically get a complaint about dryer over-heating, or shrinkage every couple months. However, since we have had the BiO-Therms installed I have not received a single complaint.
